

# Integrated Dairy Farm Economic and Environmental Assessment of Management Strategies

V.E. Cabrera, M. Dutreuil, C. Hardie  
**University of Wisconsin**

Project Supported by USDA National Institute of Food and Agriculture Organic Agriculture Research and Extension Initiative Grant No. **2010-51300-20534**

# Objectives

1. Characterize Wisconsin organic, grazing, and conventional (alike) dairy farm systems
2. Perform whole dairy farm integrated evaluations
3. Find best management practices that concurrently increase profit and decrease environmental impacts

# Materials and Methods

1. Collect comprehensive dairy farm information
2. Analyze, synthesize, and adjust data collected
3. Apply the Integrated Farm System Model (IFSM)

# The Survey

## 9 Sections

- 1) Farm business structure and decision makers
- 2) People working on the farm
- 3) Dairy herd and management
- 4) Feeding management
- 5) Pasture management
- 6) Land management and cropping operation
- 7) Manure and nutrient management
- 8) Economic information; and
- 9) Assessment of farm management and satisfaction.

**Feeding Strategies on Wisconsin Dairy Farms:  
Economic, Production, and Environmental Outcomes**

Participation in the study is **voluntary**. All answers to questions in this survey will be kept **strictly confidential**, and the results will only be used in statistical summaries. Individual farm information will not be identified in any publication. University of Wisconsin-Madison, Social and Behavioral Sciences, IRB Protocol Number SE-2009-0401.

**Consent forms need to be signed prior to the start of the interview**

We welcome your comments and suggestions

ENUMERATOR: \_\_\_\_\_  
DATE OF SURVEY: \_\_\_\_\_  
SURVEY STARTING TIME: \_\_\_\_\_ SURVEY ENDING TIME: \_\_\_\_\_  
FARMER ID#: \_\_\_\_\_

# Sample

1. Random sample from list of all dairy producers in Southwest
2. Purposeful sample of grazing dairy producers
3. All certified dairy cattle organic producers

# The Interview

Face-to-face interviews

- 5 hours on average
- Collected 2011 and 2012
- Monthly data for 2010
- Observations: 131 farms

- PhD Student  
Marion Dutreuil

- MS Student  
Claudia Hardie

# An organic WI dairy farm

# A grazing WI dairy farm

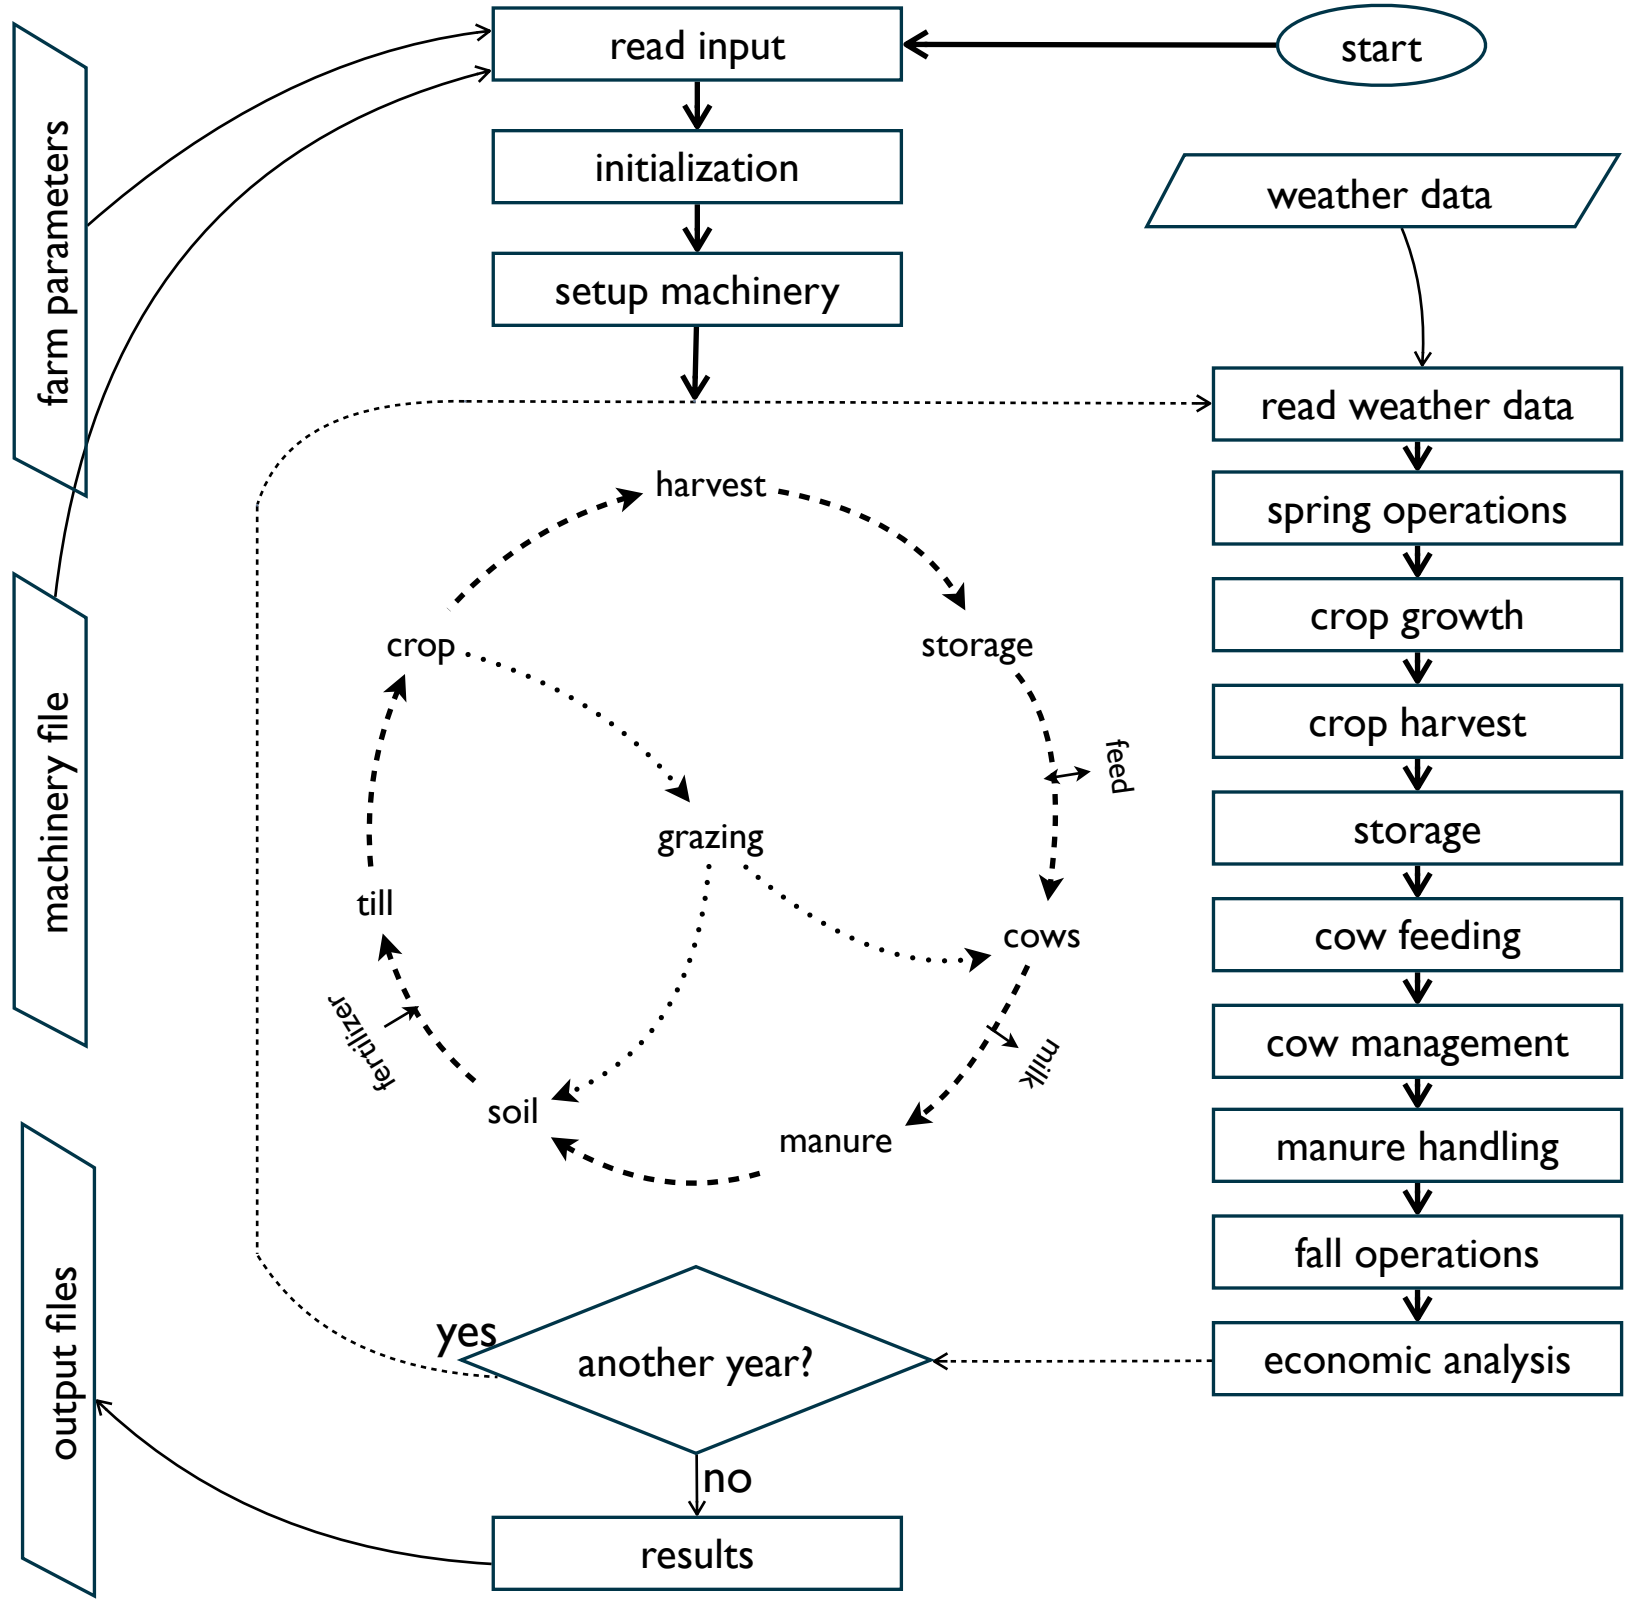

# The Integrated Farm System Model (IFSM)

- A whole-farm simulation for crop, dairy, and beef production
- Performs simulations over many years of weather to determine long-term performance, environmental impacts and economics
- Simulates major process of crop production, harvest, storage, feeding, milk production, manure handling, nutrient balances, and gasses emissions

**M&M**

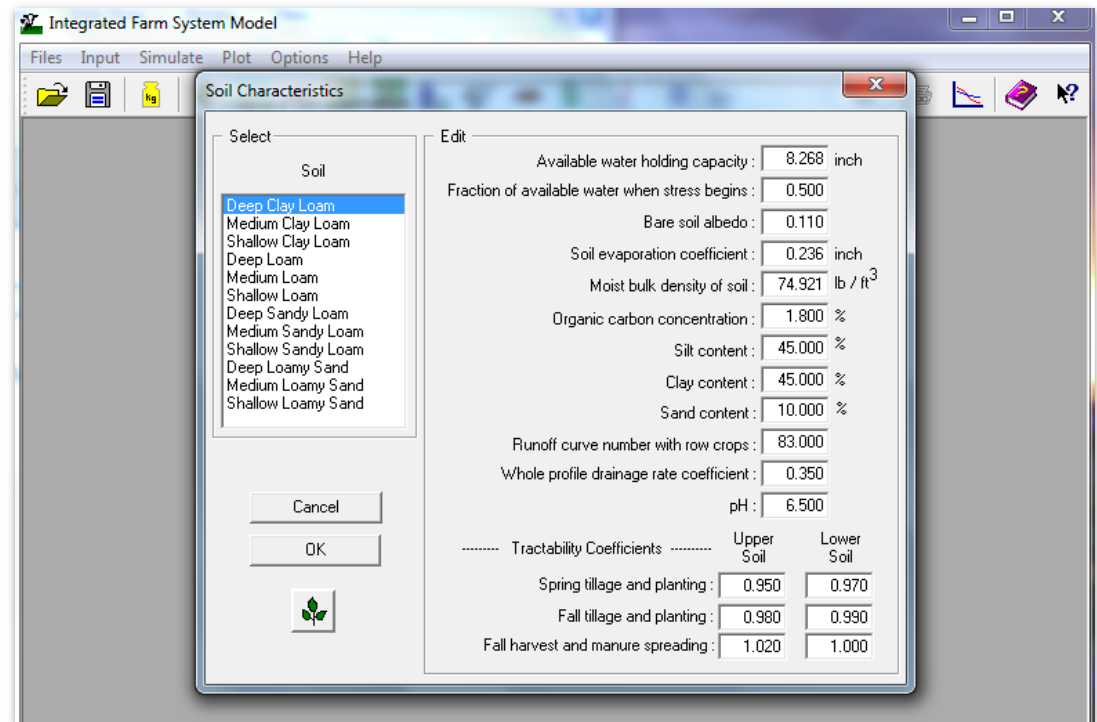

**Integrated  
Farm  
System  
Model**

# IFSM inputs

## 10 Sections

- 1) Crop and soil
- 2) Grazing
- 3) Machinery
- 4) Tillage and planting
- 5) Crop harvest
- 6) Feed storage
- 7) Herd and feeding
- 8) Manure and nutrient
- 9) Economics
- 10) Weather

# IFSM CROP inputs

- Alfalfa: acreage, standing life, fertilization, irrigation
- Grass: acreage, standing life, fertilization, grasses and legumes %.
- Corn: plant population, fertilization, irrigation.
- Small grain: type, double cropped, fertilization, irrigation
- Soybeans: plant population, fertilization, irrigation.

# IFSM HARVEST inputs

- SMALL GRAINS:
  - Dates for harvesting as silage, high moisture grain or grain
  - Use on the farm
  - Use of straw for bedding
- SOYBEANS:
  - Starting date for harvesting
  - Use on the farm
  - Cost for roasting

# IFSM HARVEST inputs

- ALFALFA AND GRASS:
  - Up to 5 cuts.
  - Type of harvest, starting date and NDF content indicated for each cut.
  - Time available each day for harvesting can be adjusted.

- CORN:
  - Dates for harvesting as silage, high moisture corn or dry corn
  - Corn silage cutting height
  - Corn silage processing
  - Type of high moisture corn

# IFSM HERD inputs

- Breed, number of lactating cows, number of young stock over one year, number of young stock under one year, target milk production, proportion of first lactation animal in the herd, calving strategy.
- FEEDING:
  - Feeding method for grain, silage and hay
  - Ration constituents: % hay, % phosphorus, % protein, forage to grain ratio, protein and energy supplement.
  - Feed characteristics can be adjusted

Select	Edit
Crude Proteins	Supplement: <input type="text" value="Canola seed meal"/>
Canola seed meal	Crude protein : 44.000 % DM
Corn gluten meal	Degradable protein : 70.000 % CP
Cotton seed meal	Acid detergent insoluble protein : 5.000 % CP
Soybean meal, 44%	Net energy of lactation : 0.780 Mcal/lb DM
Soybean meal, 48%	Total digestible nutrients : 69.000 % DM
Undegradable proteins	Neutral detergent fiber : 26.000 % DM
Blood meal	Phosphorous : 1.130 % DM
Brewers grain	Potassium : 1.400 % DM
Corn gluten meal, 60%	Feeding limit : 0.000 lb DM/cow/day
Cotton seed	Price : 163.000 \$/ton DM
Other feeds	
High moisture ear corn	
High moisture grain	
Corn grain	
Small grain	

# Farm profiles

	Conventional	Grazing	Organic
Farmland, ac	313		
Cows	85		
Heifers	75	70	73
Milk production, lb/cow/yr	22,341	16,508	14,012
Milk price, \$/cwt	15.82	16.49	24.70
Alfalfa, ac	117	93	112
Corn, ac	105	40	41
Soybean, ac	6	15	9
Oats, ac	30	12	39
Grass, ac	55	153	111

# Crop profiles

## Conventional system

## Grazing system

## Organic system

# Management strategies

Conventional	Grazing & Organic
Allow <b>grazing</b> to lactating cows	Decrease <b>forage:grain</b> ratio
<b>Incorporate</b> manure same day of application	Add a 6-month <b>manure storage</b> facility
<b>Suppress</b> commercial fertilizers	<b>Increase</b> milk production by <b>30%</b>

# Results: Base

	Conventional	Grazing	Organic
<b>Net return, \$/yr</b>	<b>105,008</b>	<b>101,360</b>	<b>151,342</b>
<b>GHGE total eq./cow per yr</b> (lb CO <sub>2</sub> )	14,636	10,140	10,398
<b>GHGE total eq./lb milk</b> (lb CO <sub>2</sub> )	<b>0.66</b>	<b>0.61</b>	<b>0.74</b>
<b>GHGE housing, %</b>	45.3	37.2	38.0
<b>GHGE manure, %</b>	14.5	0	0
<b>GHGE feed product., %</b>	14.8	19.3	17.3
<b>GHGE grazing, %</b>	4.2	29.9	29.3
<b>GHGE fuel, %</b>	4.3	3.4	4.4
<b>GHGE secondary, %</b>	16.9	10.2	11.0

# Results: Conventional

	Base	Grazing lactating cows	Incorporate manure same day	Suppress commercial fertilizers
<b>Net return, \$/yr</b>	105,008	<b>113,330</b>	105,103	<b>113,755</b>
<b>GHGE total CO<sub>2</sub> eq./cow per yr</b> (lb)	14,636	12,067	14,691	14,436
<b>GHGE total CO<sub>2</sub> eq./lb milk</b> (lb)	0.66	<b>0.54</b>	0.66	0.65
<b>GHGE housing, %</b>	45.3	29.9	45.2	45.9
<b>GHGE manure, %</b>	14.5	13.1	14.5	14.6
<b>GHGE feed product., %</b>	14.8	16.1	15.0	14.3
<b>GHGE grazing, %</b>	4.2	18.5	4.2	4.2
<b>GHGE fuel, %</b>	4.3	4.4	4.2	4.3
<b>GHGE secondary, %</b>	16.9	18.0	16.9	16.7

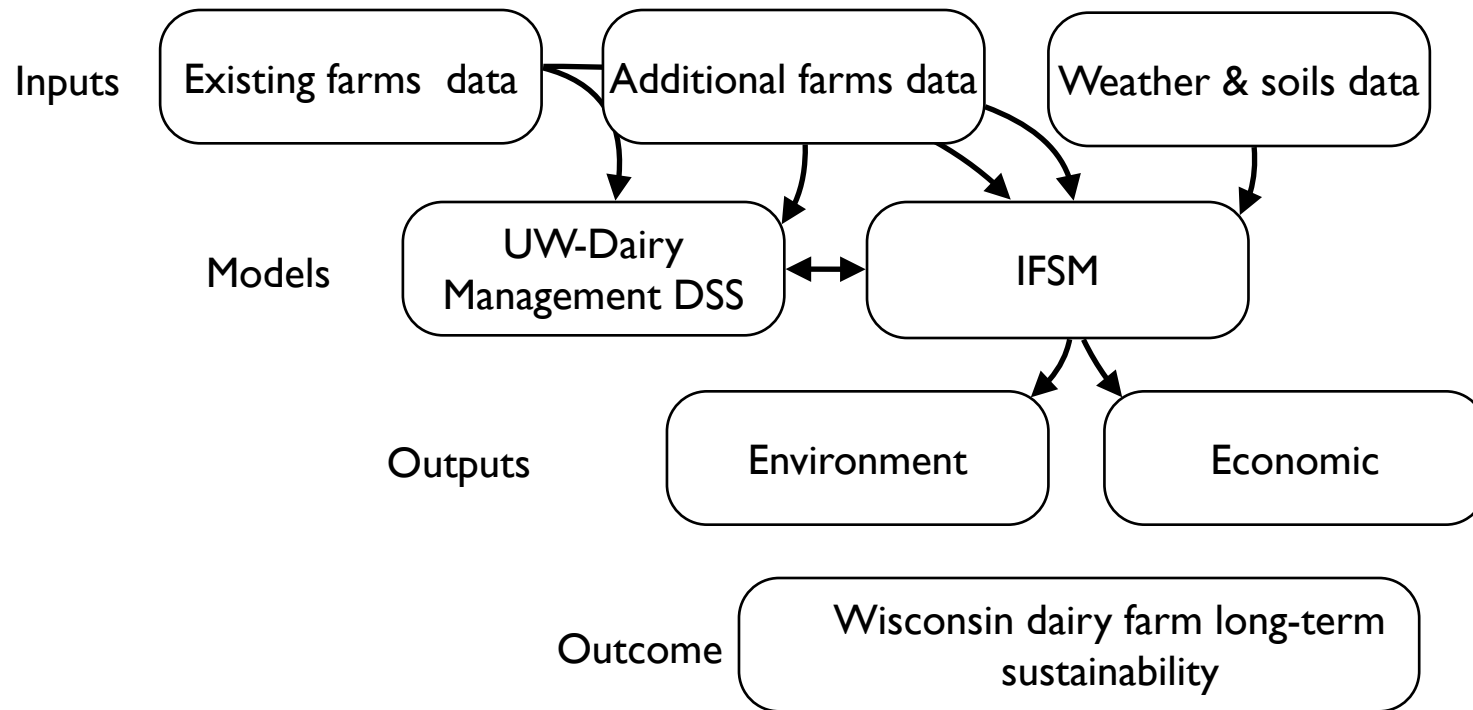

# Results: Grazing

	Base	Decrease forage:grain	6-mo manure storage	Increase 30% milk prod.
<b>Net return, \$/yr</b>	101,360	<b>79,859</b>	101,115	<b>146,477</b>
<b>GHGE total CO<sub>2</sub> eq./cow per yr</b> (lb)	10,140	7,852	10,628	10,660
